

# How Flex improved worker experience, enhanced productivity and eliminated time leakage with OLOID Time Clock

## OVERVIEW

Flex is the third largest global electronics manufacturing services provider and original design manufacturer. With over 200,000 employees spread across multiple countries and hundreds of factories and warehouses.

## CHALLENGES

Flex's IT and HR leaders were looking to enhance employee experience, reduce payroll inaccuracies, and eliminate unproductive wait times, particularly in large facilities, by modernizing their time clocks.

## SOLUTION

OLOID provided an iPad based time-clock that employed facial recognition with seamless integration with the existing time and attendance infrastructure. The solution featured:

- **Inexpensive standard off-the-shelf hardware**
- **Easy onboarding and intuitive user experience**
- **Fast cycle time per user (under 1 second)**
- **Zero false positives - high identity assurance**
- **Could not be spoofed with pictures or video playback**

## RESULT

Flex has saved millions in cost, and the replacement of end-of-warranty time clocks has resulted in a 75% decrease in Capex outlay. OLOID has demonstrated a quick payback period of less than a year.
